

City of Pittsburgh Fleet Efficiency Report

Prepared by:

Firmin A. Maurice IV

Fleet Services Senior Manager – Office of Management & Budget

Prepared for:

Prepared in accordance with §493.03 of the Pittsburgh Code of Ordinances

Date:

September 2025

Executive Summary

The City of Pittsburgh maintains a fleet of approximately **1,300 vehicles and equipment assets** across all departments. The fleet's **average age is 8.3 years**, with critical service units in Fire, EMS, and Public Works often exceeding 20 years of service. This aging profile drives increasing repair costs, downtime, and reliability risks.

Key Findings:

- **High-Cost Units:** 29 vehicles exceeded the **30% repair threshold** in FY24, signaling replacement is more cost-effective than continued repair.
- **Maintenance Burden:** Police, EMS, and DPW show higher per-unit repair costs than Citywide averages.
- **Utilization Variability:** Police and EMS units are significantly over-utilized, driving higher maintenance demand and accelerated replacement needs. **Under-utilization** will be reviewed in a **Right-Sizing Study**.
- **Fuel Spend:** City fuel costs totaled **\$3.12M in 2024**. YTD 2025 spend is **26% lower**, driven by reduced per-gallon costs, but long-term savings depend on hybrid/EV transitions and idle reduction strategies.
- **Lifecycle Needs:** Replacement scoring identifies **5 critical units** that should be replaced immediately, with an additional **287 units due within 1–2 years**.

Recommendations:

1. **Accelerate Replacement** of high-cost units (Fire, EMS, Refuse) through structured capital planning to reduce downtime and service risk.
2. **Launch a Right-Sizing Study** to evaluate take-home, pool, and underutilized vehicles and ensure efficient deployment.
3. **Invest in Fuel Savings** continue hybrid/EV replacements for administrative and light-duty vehicles and modernizing fueling infrastructure with smart pumps.
4. **Strengthen Preventative Maintenance Compliance** and downtime tracking to improve reliability and extend vehicle life.
5. **Capital Planning:** Adopt a 5-Year Replacement Plan to smooth capital spending and ensure critical services remain reliable.

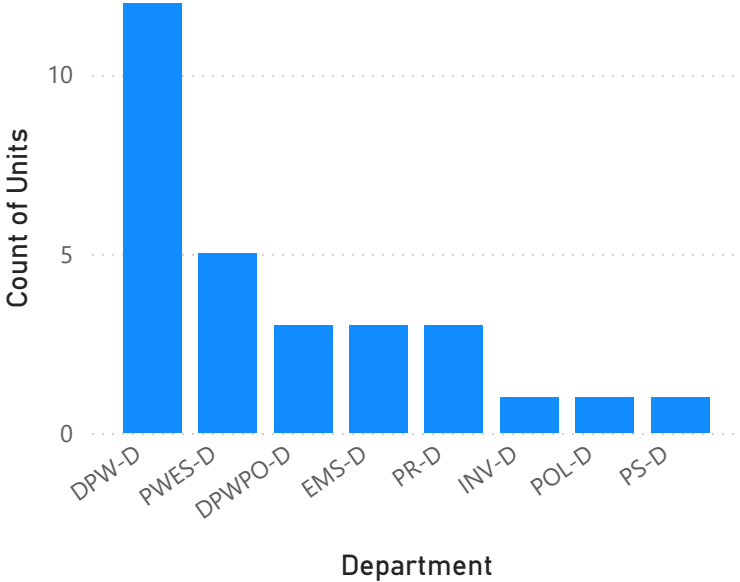

Overall: Without intervention, the City's fleet will continue to face rising maintenance costs, increased downtime, and escalating service risk. With targeted capital investments, right-sizing, and operational improvements, Pittsburgh can achieve a more efficient, reliable, and cost-effective fleet.

Count of Units by Department

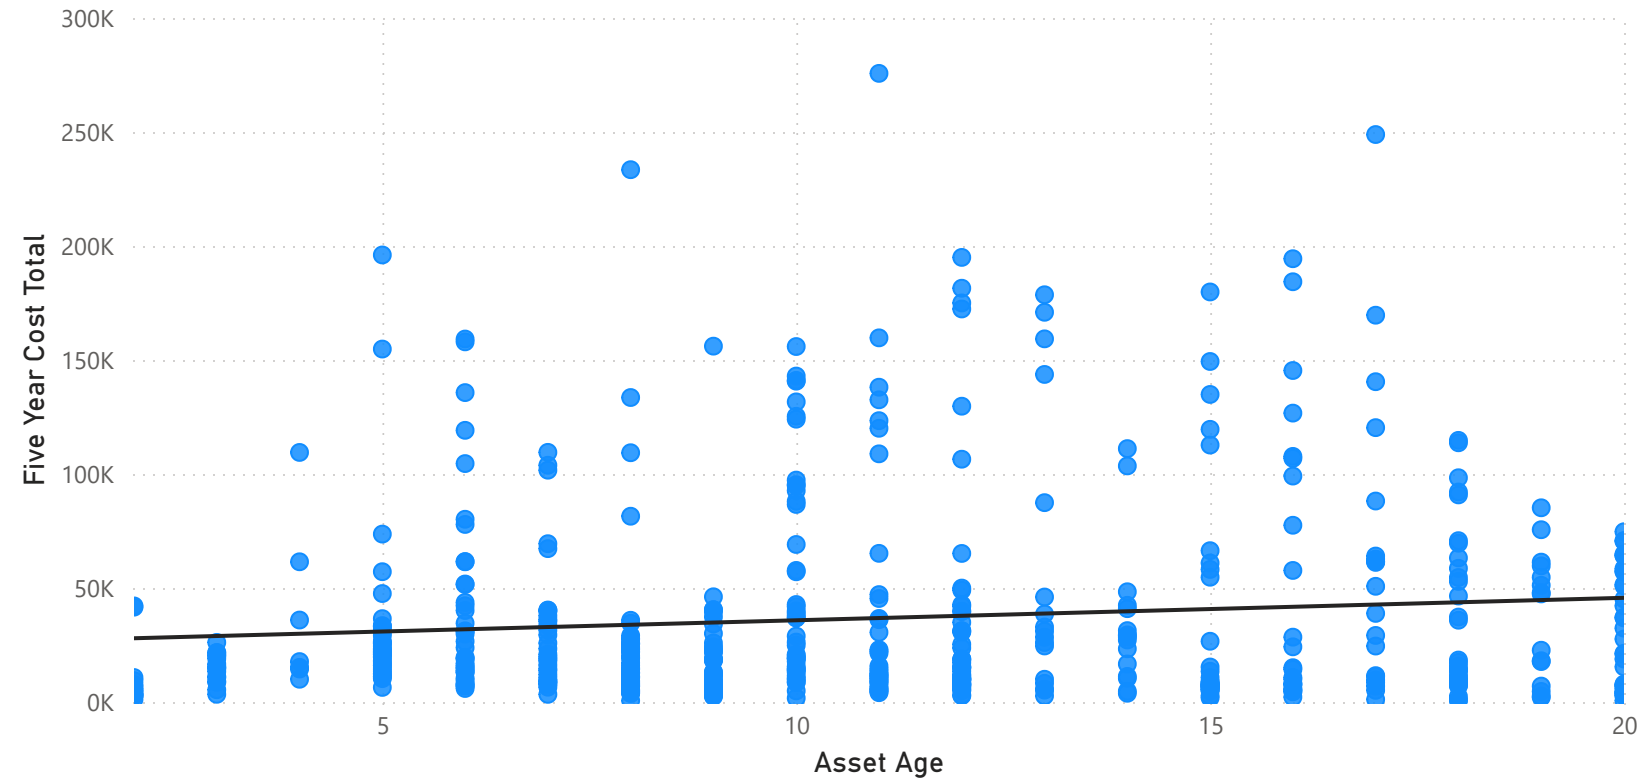

During the last fiscal year, **29 units** recorded repair costs exceeding 30% of their original purchase price. These threshold-exceeding vehicles span refuse packers to departmental support units, and represent assets where continued repair spending is no longer cost-effective. Prioritizing replacement of these units will reduce the City’s exposure to high downtime risk and free up maintenance dollars currently tied up in reactive repairs.

Department	DESCRIPTION	Purchase Price	Total Cost

This list was developed using the Fleet Replacement Scoring model to prioritize units for replacement based on age, cost, downtime, and utilization. Scores inform capital submission recommendations, ensuring limited funding is directed to the highest-need assets.

Asset Age and Five Year Cost Total

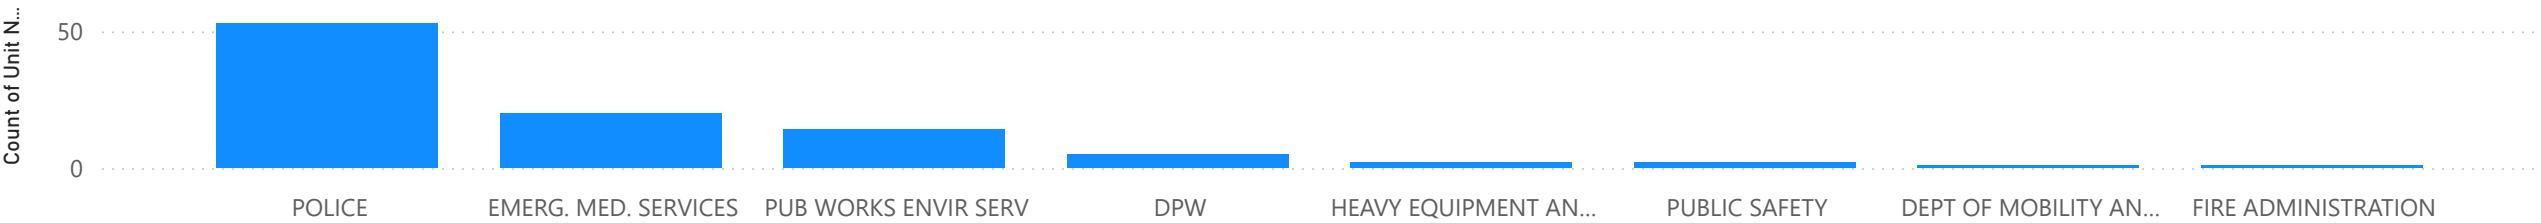

Analysis of five-year repair history demonstrates a clear pattern: repair expenditures rise significantly once vehicles surpass 10 years of service. Units older than this threshold show a disproportionate share of high-cost repairs, particularly in heavy equipment and public safety apparatus.

Without planned replacement, the City can expect aggregate maintenance spending to continue climbing as additional assets age into this high-risk category. Proactive capital investment in upcoming fiscal years will mitigate these escalating costs, reduce downtime risk, and stabilize long-term fleet expenses.

493.03.B.6 – Utilization Analysis

Count of Unit Number by Department Name

Findings (Year 1):

Data systems are now in place to track utilization across the fleet.
For this analysis, vehicles were classified using the following thresholds:

- **Underutilized:** fewer than 1,750 miles/year.
- **Normal Use:** 2,500–15,000 miles/year.
- **Overutilized:** more than 15,000 miles/year.

Initial results show **overutilization concentrated in Police and EMS fleets**, where units are exceeding these benchmarks at higher rates than others. Other departments show fewer overutilized units, though underutilization will need further review in subsequent reporting.

- This variability underscores the need for a structured Right-Sizing Study to evaluate assignment practices and workload distribution.

Recommendation:

- Prioritize **overutilized units** (Police, EMS, Refuse) for accelerated replacement planning, to reduce downtime risk and escalating maintenance costs.
- Evaluate **underutilized assets** (sedans, pickups) for reassignment, or removal.
- Develop evidence-based thresholds to guide future reporting and align Pittsburgh’s fleet practices with peer cities.

\$3.12M

Fuel Total \$ 2024

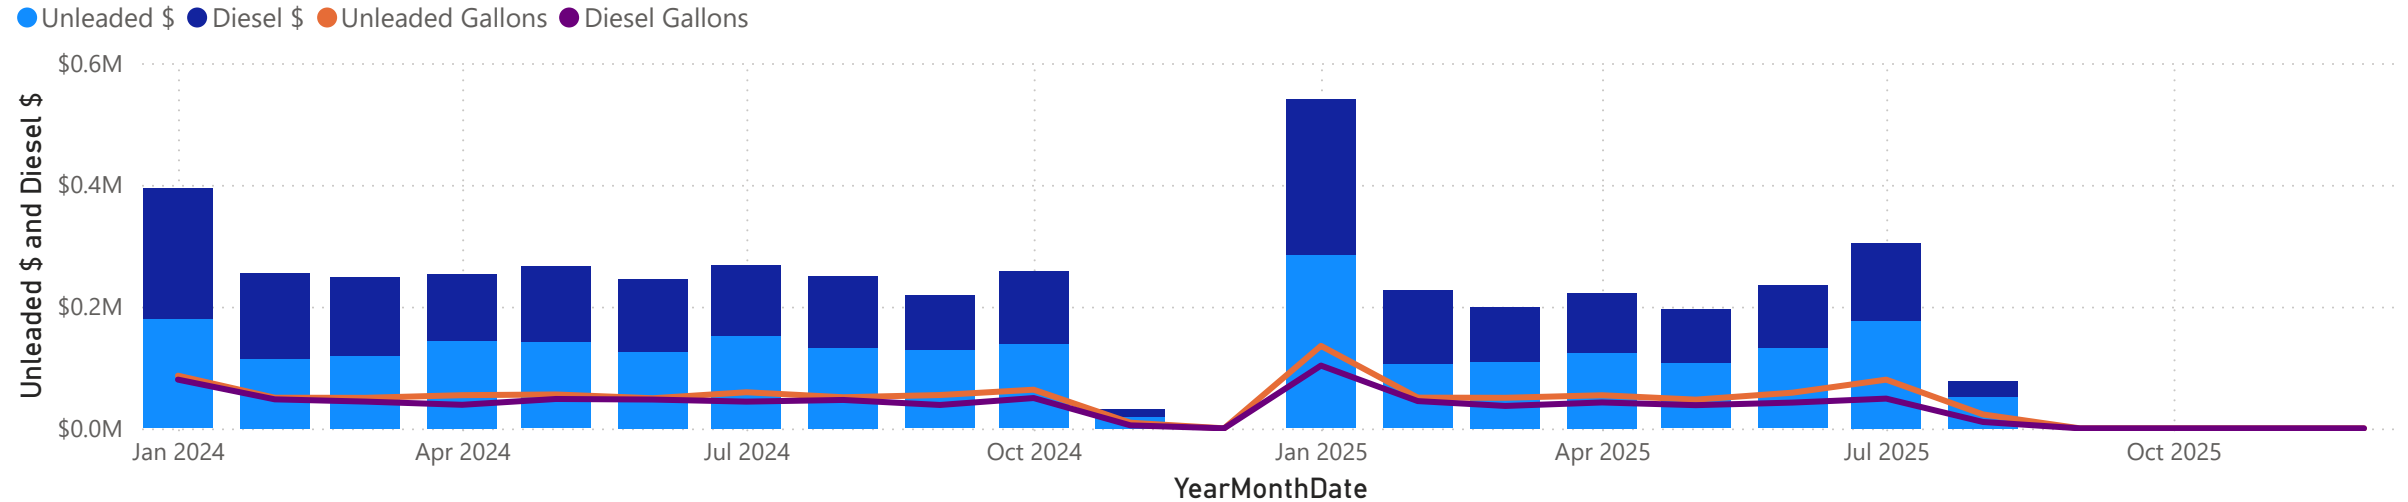

\$2.3M

YTD Fuel \$

-26.30%

YoY Fuel \$ %

Unleaded \$, Diesel \$, Unleaded Gallons and Diesel Gallons by YearMonthDate

Findings (Fuel Trends):

- Total 2024 fuel spend: **\$3.12M** across diesel and unleaded.
- 2025 YTD spend: **\$2.3M**, ~26% lower than the prior year, driven by lower average per-gallon cost (\$2.66 vs \$2.91).
- Diesel remains the dominant expense, while unleaded is primarily consumed by Police and admin fleets.

Opportunities:

- **Hybrid/EV Transition:** Phase in hybrid SUVs and EV pickups in place of light-duty vehicles where lifecycle costs are competitive.
- **Fueling Infrastructure:** Deploy **smart pump technology + centralized tracking** to cut slippage and improve accountability.
- **Idle Reduction:** Broaden telematics rollout to reduce waste, particularly in Police, DPW, and EMS fleets.

Recommendation:

Adopt a **blended approach**: expand EV/hybrid adoption for light-duty fleets, modernize fueling infrastructure, and target operational savings through idle-time reductions. These steps will sustain declining cost trends while advancing sustainability goals.

Efficiency Actions & Recommendations

Fleet Services can improve service efficiency and reduce long-term costs by focusing on preventative maintenance compliance, downtime tracking, and workload management. Expanding telematics and shop reporting will reduce avoidable delays and link repair data more directly to replacement planning. Standardizing fueling infrastructure with smart pumps and consolidating underutilized vehicles will further lower operating costs.

At the same time, sustained efficiency gains require **capital investment in fleet replacement**. High-mileage refuse, EMS, and DPW units are consuming disproportionate repair dollars and need accelerated replacement to reduce downtime risk. Establishing a rolling five-year replacement plan with dedicated capital funding will prevent spikes in emergency repairs, stabilize operating budgets, and improve service reliability across departments.

Supporting Data Tables

The following detailed data tables are provided in support of the Fleet Efficiency Report. These lists are included for transparency and reference and correspond to the analysis presented in the main body of the report:

- **Full Fleet Inventory** – Unit ID, make/model, year, mileage, department assignment.
- **Maintenance & Repair Costs** – Department-level detail including total spend, unit counts, and per-unit averages.
- **Replacement Scoring & Capital Submission List** – Unit-level replacement scores and recommended year.
